M01 - INTRODUCTION TO VUE.JS

MÓDULO

- 1) Create a project called **F06EX01** that aims to familiarize the student with form's management. The application to create is called **MyToDo** and it is a simple task manager.

Main features:

- a. Insert new tasks (simple text of the task to be created)
 - b. List tasks in a table
 - c. Remove tasks individually
- 2) Improve the application so that at the time of insertion of a new task it is possible to say whether it is a personal or work-related task.
 - 3) Apply a filter to the table that allows the user to list only personal tasks, only professional tasks, or all
 - 4) Implement data recording and recovery through data persistence on local storage
